Product description

The protective films are designed to fit various PC keyboards and notebooks of different sizes. Please do not hesitate to ask us!

As an alternative to buying a membrane keyboard, our keyboard protection foils have often proven their worth. The foils are made of polyurethane and fit over the keys like a second skin.

This prevents liquid or other working materials (e.g. sawdust or metal chips and other dirt) from entering the keyboard unintentionally.

Regular cleaning of the keyboard is very time-consuming and can, in the worst case, lead to a permanent defect if not carried out properly.

The keyboard protection films have a wafer-thin but effective protective layer against viruses and bacteria.

Features

- Skins are made of a PVC-free material and are easy to clean
- The foils contain no polybrominated diphenylethers
- No polybrominated dibenzodioxin or dibenzofurane is set free
- The keyboard protection films are antiviral and antibacterial effective (certified)
- Longer life of the keyboard due to the matching keyboard cover
- Isopropylalkohol
- Diesel
- Cleaners
- Distilled water
- Motor oil
- Gasoline
- 40% sulphuric acid (battery acid)
- The material has self-extinguishing qualities
- The US safety standards FMVSS Nr. 302 are met

Technical data

Mechanical data

Dimensions	273 or 400 x 152 or x 185 mm
------------	------------------------------

Housing	Rubber or Plastic
---------	-------------------

Keys

Operational Life	10 mio. keystrokes min.
------------------	-------------------------

Environment

Operating Temperature	from -40 °C to 70 °C
-----------------------	----------------------

Additional Information

Material thickness	0,25mm (250µm)
--------------------	----------------

Hardness	84 IRHD
----------	---------

Weight	1,13g/cm ³
--------	-----------------------
