Product description

X-keys XK-12 Joystick USB Keyboard bundled with the PTZ 12 key set to assemble your own custom PTZ controller.

An embedded three axis joystick with 12 programmable keys and addressable backlighting in a compact, low profile footprint.

The MDM™ joystick provides accurate reliable control in three axis with infinite rotation. It can be configured as a standard USB joystick (Game Controller) or read as raw positioning data as described in our free SDK.

The full travel keys have the same feel as a standard keyboard and angled feet give the unit a slight tilt for better viewing of the key legends. Blue and red addressable backlighting enhances key identification in low light environments.

Quick demo of the XK 12 PTZ controller from xKeys inside of vMix >>>

Features

- Stable rubberized feet prevent slippage of the device. Suitable for desktop, mounted, or hand held use
- Including layout templates for insertion into the keys (legend of diverse characters and fonts)
- Each of the 12 keys can be customized individually. Colored keycaps as well as the grouping of several keys to only one key is possible.
- Mouse commands (click, scroll, cursor movement) may also be programmed.
- Individual addressable backlighting under each key
- The joystick version is often used in sleep laboratories for sleep diagnoses.
- Ideal for monitoring equipment to serve multiple screens (control systems, security systems, control center at horse racing tracks)
- Video control and video editing systems
- X-ray practice
- Photo labs and studios
