Product description

The X-keys Foot Pedal offers two versions to suit your requirements. The front hinged version allows the user to rest the ball of their foot on the main pedal and activate the control with slight additional pressure. The rear hinged version allows the user to rest a foot, on the pedal keeping the control activated comfortably for long periods.

The X-Key Foot Pedal is designed for hands free activation of keyboard commands but also for applications that do not need a regular keyboard.

This is perfect for transcription playback, dictation microphone activation, or video capture.

Features

- The XK-footpedal works with a standard keyboard
- It removes annoying combinations of keys from the fingers.
- Includes software for Windows or Mac.
- The three freely programmable keys permit all possible combinations of keys, which facilitate your work.
